246

CIRCULAR.

This pipe is made of a composition, the basis of which is REFINED TRINIDAD ASPHALTUM, rolled under heavy pressure, alternate layers of asphaltum and canvas, thus making it very strong, tough and durable. No acids which appertain to water or filth have any effect on it, and there is consequently no rust or corrosion to cause obstructions; the inside surface being very smooth, making it the best soil pipe yet offered. Our Price List is for pipe suitable in make and strength for water and gas mains and for soil pipe. For sewer and drain pipe, which does not require so much canvas, we make the same sizes at 10 per cent. reduction from this list. The composition and mode of manufacture make the pipe FROST-PROOF, and our 2-inch or 3-inch pipe, telescoped on service pipe, for water or gas, will prevent trouble from frozen pipes.
